

## Profile Summary

Driven web developer adept at problem-solving and thriving in collaborative environments, fueled by a passion for coding and eager to embrace emerging technologies.

## Professional Skill

- React
- JavaScript
- HTML
- CSS
- Redux (RTK)
- Tailwind CSS
- Python
- Node JS
- Express JS
- MongoDB
- Bootstrap
- Material UI
- REST API
- Unit Testing

## Education

### Bachelor of Computer Application - Amity University

2021-2023

Namaste React Course - Namaste Dev [Link](#)

Namaste Nodes JS Course - Namaste Dev [Link](#)

## Work Experience

### Front-end Developer at Manthan Experts 10-02-2022 - present

[Website](#)

- Developed responsive and dynamic user interfaces using React, JavaScript, HTML, and CSS.
- Utilized Redux Toolkit for state management, ensuring efficient data flow and application stability.
- Led a team of 2 developers, providing mentorship and overseeing project timelines and deliverables.
- Collaborated closely with designers and backend developers to integrate front-end code with APIs and backend services.
- Implemented best practices in web development to ensure high performance, scalability, and maintainability of websites.
- Responsible for creating pixel-perfect UI components and ensuring cross-browser compatibility.
- Actively participated in code reviews, providing constructive feedback and ensuring adherence to coding standards.
- Delivered client-facing projects, meeting deadlines and exceeding client expectations for design and functionality.
- Kept up-to-date with industry trends and advancements in front-end technologies, incorporating new tools and methodologies into projects.

## Project Work

### Video Streaming App (NetflixGPT) : React JS, Redux toolkit, Tailwind CSS, RRD

[Firebase Link](#)

- I have developed this project from scratch and built high performant large scalable web application using React JS along with Redux (RTK).
- I have created reusable and maintainable components and I have also created custom hooks. The code is testable, maintainable and reusable. Used Form-handling, Memoization.
- In this project I have used **TMDB** APIs to fetch the data and then used it, I have also used **GPT** APIs to create a search functionality, in which a user can type anything and it suggests the movies and TV serials accordingly.
- This web application is fully **Config driven UI** and it is fully responsive.

## Other Projects
